NAME	VALUE	REFERENCE RANGE	LAB
F LDL CHOL, CALCULATED	89	<100 (mg/dL)	TBR
- LDL-C is now calculated using the Martin-Hopkins			
- calculation, which is a validated novel method providing			
- better accuracy than the Friedewald equation in the			
- estimation of LDL-C.			
- Martin SS et al. JAMA. 2013;310(19): 2061-2068			
- (http://education.QuestDiagnostics.com/faq/FAQ164)			
- Desirable range <100 mg/dL for patients with CHD or			
- diabetes and <70 mg/dL for diabetic patients with			
- known heart disease.			
F TRIGLYCERIDES	148	<150 (mg/dL)	TBR
F NON HDL CHOLESTEROL	114	<130 (mg/dL (calc))	TBR
- For patients with diabetes plus 1 major ASCVD risk			
- factor, treating to a non-HDL-C goal of <100 mg/dL			
- (LDL-C of <70 mg/dL) is considered a therapeutic			
- option.

F DIFFERENTIAL			TBR
- An instrument differential was performed.			
F HEMOGLOBIN A1C	4.9	<5.7 (% of total Hgb)	TBR
- For the purpose of screening for the presence of diabetes:			
- <5.7% Consistent with the absence of diabetes			
- 5.7-6.4% Consistent with increased risk for diabetes			
- (prediabetes)			
- >or=6.5% Consistent with diabetes			
- This assay result is consistent with decreased risk of			
- diabetes.			
- Currently, no consensus exists for use of hemoglobin A1c			
- for diagnosis of diabetes in children.			
- According to American Diabetes Association (ADA)			
- guidelines, hemoglobin A1c <7.0% represents optimal control			
- in non-pregnant diabetic patients. Different metrics may			
- apply to specific patient populations. Standards of
